4:00pm- 5:30pm

When Disease Strikes the Leader: Turning Points in History

Salvatore Mangione, MD

The year 2019 marks the 100th anniversary of President Wilson's stroke, which not only removed him from political life, but also began "the most serious case of presidential disability and medical cover-up in American history". Hence, this anniversary provides us with a timely opportunity to revisit how leaders' illnesses impact on national policies but also on their physicians' allegiance, both issues of great interest to the medical community.

Salvatore Mangione, MD, is a clinician-educator with a long interest in physical diagnosis, medical history, community service and the role of the humanities in medicine. His innovative programs and engaging teaching style have been recognized by multiple teaching awards, and his work has been featured in the New York Times, the Los Angeles Times, the Wall Street Journal, the BBC, CNN, NPR, and Forbes. Dr. Mangione has been an invited speaker at many national and international meetings, especially in regard to using visual arts to teach bedside observation. He is the author of the book Secrets in Physical Diagnosis.
